(A) Fuel supply by supply set (kelp area on top)
Liquid and gaseous fuel supplied (TWh/a)
Kelp HTL fuel
Lake and marsh fuel
Existing biofuel feedstocks
Forest and farm residues
Electrofuels
25k km²
47k km²
55k km²
93k km²
76k km²
All routes (least-cost)
No electro-fuels
Electric or biofuel only
Electricity, seaweed, existing biofuels
Same, transition demand
(B) Territorial account (targets)
Territorial emissions, NIR boundary (Mt CO₂e/a)
Oil and gas sector
Other sectors
2030 target (−40 to −45%)
2035 target (−45 to −50%)
2005: 763
685 (−10%)
516 (−32%)
505 (−34%)
483 (−37%)
2024 inventory
Renewable transport, oil exported
Domestic refining closes
Oil sands CCS
(C) Lifecycle account
Well-to-wheel, all locations (Mt CO₂e/a)
273
20 (−93%)
Fossil
Renew-able
